Construction Site Policy for Compliance with Fire Safety Provisions

California has adopted a statewide uniform building code, codified in title 24 of the California Code of Regulations. The code imposes a mandatory duty on local jurisdictions to adopt rules and regulations which include the same building code requirements as those contained in the statewide building codes. Pursuant to that requirement, the City of Chula Vista Municipal Code section 15.36.010 adopts and incorporates by reference the California Fire Code, 2001 Edition.

California Fire Code section 8704 establishes fire safety standards for sites during the construction phase. Section 8704.2 requires that access roads sufficient to accommodate fire department apparatus be established and maintained. Section 8704.3 requires the installation of operational water supplies. Temporary access roads and water supplies may be permitted during the construction period upon approval by the Fire Department. These provisions are incorporated in Chula Vista Fire Department policies 2916.00 and 2916.01. The policies apply to residential and commercial construction projects and mandate that approved water supplies and access roads be in place prior to the delivery of combustible materials on any construction site. For purposes of compliance with the policies the following definitions apply:

- Water Supply means a fully operational and tested fire service utility system serving the permanent hydrant system.
- Access means a fully improved street section (private or public); a first layer of asphalt is also acceptable to allow for access to within 150 feet of all combustibles.
- When approved by the Fire Marshal, temporary access roadways and temporary water services may be substituted for permanent road and water supplies.

Requests for temporary roadways must be submitted in writing for review and approval by the Fire Marshal. Requests must include a site plan, geotechnical information, and a time frame indicating how long the temporary roadways will be in place (for the specific requirements, please see CVFD Policy 2916.03). The phasing of improvements and/or the point at which the temporary road extends is at the discretion of the Fire Marshal. Temporary access roads are to be constructed of an asphalt concrete pavement (of a suitable thickness), on top of an appropriate native soil or base as approved.

Requests to install temporary water services must be submitted in writing for review and approval by the Fire Marshal. Requests must include a site plan, and a time frame indicating how long the temporary water services will be in place.

Street Signs – California Fire Code section 901.4.5 requires street signs at all construction sites. Street signs may be permanent signs as approved for installation by City staff or temporary signs approved by the Fire Marshal. Street signs must indicate the street name and the hundred block.

The following California Fire Code sections apply to construction site safety provisions covered by this document.

- Section 103.3.1.1 authorizes the Fire Marshal to inspect construction sites, as often as necessary, to ensure compliance with these requirements.
- Section 103.3.1.3 authorizes the Fire Marshal to stop work at any site found to be in violation of these requirements.
- Section 103.4.1.1 authorizes the Fire Marshal to issue corrective notices.
- Section 103.4.4 authorizes the Fire Marshal to issue citations to persons who fail to take immediate corrective action for violations under this policy.

Chula Vista Municipal Code provides for penalties for violations of the California Fire Code. Administrative penalties of up to $500.00 per day and civil penalties of up to $1000.00 per day may be assessed. See CVMC sections 1.40.100 (D) (1) and 1.40.110(A). Finally, pursuant to Government Code section 38773, costs and penalties may be recovered for violations of the fire code.

If any of the above requirements are not in place in accordance with Fire Department and state regulations, the construction project will be shut down and all inspections will be temporarily stopped until provisions have been made to provide compliance. The undersigned hereby certifies that he/she has read the terms and conditions of this Policy and acknowledges that he/she understands such terms and conditions. Failure to comply with a cease and desist order is a misdemeanor and may subject the person signing this document to criminal prosecution.

The person signing this document is hereby responsible for ensuring compliance with provisions of this policy and must notify all responsible parties as to these requirements.

SECTION 5.102 DEFINITIONS

5.102.1 DEFINITIONS
The following terms are defined in Chapter 2 (and are included here for reference)

CUTOFF LUMINAIRES. Luminaires whose light distribution is such that the candela per 1000 lamp lumens does not numerically exceed 25 (2.5 percent) at an angle of 90 degrees above nadir, and 100 (10 percent) at a vertical angle of 80 degrees above nadir. This applies to all lateral angles around the luminaire.

LOW-EMITTING AND FUEL EFFICIENT VEHICLES.
Eligible vehicles are limited to the following:

1. Zero emission vehicle (ZEV), enhanced advanced technology PZEV (enhanced AT ZEV) or transitional zero emission vehicles (TZEV) regulated under CCR, Title 13, Section 1962.
2. High-efficiency vehicles, regulated by U.S. EPA, bearing a fuel economy and greenhouse gas rating od 9 oe 10 as regulated under 40 CFR Section 600 Subpart D.

NEIGHBORHOOD ELECTRIC VEHICLE (NEV). A motor vehicle that meets the definition of "low-speed vehicle" either in Section 385.5 of the Vehicle Code or in 49CFR571.500 (as it existed on July 1, 2000), and is certified to zero-emission vehicle standards.

TENANT-OCCUPANTS. Building occupants who inhabit a building during its normal hours of operation as permanent occupants, such as employees, as distinguished from customers and other transient visitors.

VANPOOL VEHICLE. Eligible vehicles are limited to any motor vehicle, other than a motortruck or truck tractor, designed for carrying more than 10 but not more than 15 persons including the driver, which is maintained and used primarily for the nonprofit work-related transportation of adults for the purpose of ridesharing.

Note: Source: Vehicle Code, Division 1, Section 668

ZEV. Any vehicle certified to zero-emission standards.

SECTION 5.106 SITE DEVELOPMENT

5.106.1 STORM WATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB LESS THAN ONE ACRE OF LAND. Newly constructed projects and additions which disturb less than one acre of land, and are not part of a larger common plan of development or sale, shall prevent the pollution of storm water runoff from the construction activities through one or more of the following measures:

5.106.1.1 Local ordinance . Comply with a lawfully enacted storm water management and/or erosion control ordinance.

5.106.1.2 Best Management Practices (BMPs). Prevent the loss of soil through wind or water erosion by implementing an effective combination of erosion and sediment control and good housekeeping BMPs.

1. Soil loss BMPs that should be considered for implementation as appropriate for each project include, but are not limited to, the following:

Comply with all lawfully enacted stormwater discharge regulations for projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of a larger common plan of development sale.

Note: Projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of the larger common plan of development or sale must comply with the post-construction requirements detailed in the applicable National Pollutant Discharge Elimination System (NPDES) General permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities issued by the State Water Resources Control Board or the Lahontan Regional Water Quality Control Board (for projects in the Lake Tahoe Hydrologic Unit).

The NPDES permits require postconstruction runoff (post-project hydrology) to match the preconstruction runoff (pre-project hydrology) with the installation of postconstruction stormwater management measures. The NPDES permits emphasize runoff reduction through on-site stormwater use, interception, evapotranspiration, and infiltration through nonstructural controls, such as Low Impact Development (LID) practices, and conversation design measures. Stormwater volume that cannot be addressed using nonstructural practices is required to be captured in structural practices and be approved by the enforcing agency.

Refer to the current applicable permits on the State Water Resources Control Board website at: www.waterboards.ca.gov/constructionstormwater. Consideration to the stormwater runoff management measures should be given during the initial design process for appropriate integration into site development.

ZONING ADMINISTRATOR
NOTICE OF DECISION

Date:	**March 15, 2023**
Applicant:	**HomeFed Village 8, LLC**
Case No.:	**DR22-0014 & CUP22-0018**
Project Name:	**Cota Vera Swim Club**
Address:	**Avenida Caprise at La Media Parkway (Otay Ranch Village 8 West)**
Project Manager:	**Janice Kluth**

Notice is hereby given that on March 15, 2023, the Zoning Administrator considered Design Review Permit (DR22-0014) and Conditional Use Permit (CUP22-0018) for the Cota Vera Swim Club filed by HomeFed Village 8 West, LLC ("Applicant").

The Applicant requests approval for a community swim club, along with associated parking and landscaping. The Project is located on a 1.5-acre vacant parcel (a portion of Planning Area R) of Otay Ranch Village 8 West ("Project Site"). The Project Site is on Avenida Caprise east of La Media Parkway and is owned by HomeFed Village 8, LLC ("Property Owner"). Zoning for the Project Site is Community Purpose Facility ("CPF") per the Village 8 West Sectional Planning Area ("SPA") Plan. The General Plan designation is Residential Medium-High (RMH). The Project is more specifically described as follows:

- The Cota Vera Swim Club is a community pool equipped with eight designated swimming lanes, a spa, a 500-square foot children's wading pool, seating, tables, a covered outdoor area, and a firepit. The facility also includes a Community Association office and meeting room, restrooms, parking and a storage/equipment room.

In accordance with the Village 8 West SPA Plan, the Project follows the Minor Design Review process, since it includes a non-residential building that is less than 20,000 square feet. All uses within CPF designated lands require an administrative conditional use permit.

In accordance with the Village 8 West SPA (Chapter 3 - Development Code), the uses allowed in the CPF zone are determined by Section 19.48.025 of the Chula Vista Municipal Code ("CVMC"). Specifically, recreational facilities (including homeowners associations) serving the local community are permitted.

All uses are subject to compliance with Chapter 4 of the SPA: 4.6 Community Use Facility Design Guidelines and 4.7.5 Community Use Landscaping.

The Project Site and its distinctive Farmhouse-style buildings are an icon for the village. The Project is centrally located in the community and accessible from a well-defined, landscaped entry on Avenida Caprise. The site plan incorporates a variety of outdoor activity areas, including an 8-lane lap pool, a spa, a children's wading pool, a turf area for outdoor fitness, lounge areas, a shade structure, and a fire circle, as well as focal elements with trees and shrubs.

The Club House building and accessory structure are designed in the Neighborhood Recreation building configuration, as an amenity feature for the neighborhoods in Village 8 West. The buildings are designed in a one-story Farmhouse style, consistent with the character and scale of the surrounding residential community. The primary building serves an office and meeting room for the Community Association and features enhanced elevations on all four sides. The building's attached covered patio provides connections between the indoor and outdoor spaces. A large, covered yoga area is also connected to the primary building by a covered walkway. A second complimentary structure houses restrooms, showers, and pool equipment. A trash enclosure is provided at the parking lot.

No parking is required for the Project, as this is a facility designed for the exclusive use of residents in the surrounding Village 8 West community; however, 14 vehicular parking spaces and 2 bicycle parking spaces are provided.

The following Data Table shows the requirements for Planning Area R. The Project is consistent with the requirements for the Planning Area.

Assessor's Parcel Number:	Portions of 644-072-07-00 and 08-00
Current Zoning:	Community Purpose Facility (CPF)
General Plan Designation:	Residential Medium-High (RMH)
Lot Area:	1.5 acres
Density:	NA
PARKING REQUIRED: As determined by site plan in conjunction with parking study, per *SPA Chapter 3.4.12.D.1*	**PARKING PROVIDED:** 14 vehicular spaces (2 are accessible) 2 bicycle spaces

The CPF land is made up of three parcels, with a total acreage of 5.61. The Swim Club will use approximately 1.5 acres of the 5.61 acres available. A lot line adjustment is being processed and a new assessor parcel number will be assigned for the project parcel.

The Swim Club will be open from dawn to dusk (changes seasonally). There will be one employee at the site in the Association office. Fourteen off-street parking spaces and a bicycle rack (2 spaces) are available for residents, employees and visitors.

The Director of Development Services has reviewed the proposed Project for compliance with the California Environmental Quality Act ("CEQA") and has determined that the Project was covered in previously certified Final Environmental Impact Report (FEIR 10-

03; SCH #2010062093, Resolution No. 2013-269), for the Otay Ranch Village 8 West SPA Plan, dated December 17, 2013; thus, no further environmental review is necessary.

The Zoning Administrator, under the provisions of Section 19.14 and 19.48.025.E of the CVMC, has approved the DR Permit and the CUP, subject to the following findings and conditions:

Conditional Use Permit Findings, per CVMC 19.14.:

1. **That the proposed use at the particular location is necessary or desirable to provide a service or facility which will contribute to the general well-being of the neighborhood or the community.**

   The Project is desirable at the proposed location due to its proximity to the residential neighborhoods in Village 8 West. The Project will provide a variety of outdoor recreational amenities as well as indoor and outdoor gathering spaces for the community.

2. **That such use will not, under the circumstances of the particular case, be detrimental to the health, safety or general welfare of persons residing or working in the vicinity, or injurious to property or improvements in the vicinity.**

   The Project provides a variety of recreational amenities and gathering spaces, to promote health and community, and it meets current codes for the proposed use. The Project will support the health, safety, and general welfare of persons residing or working in the vicinity and will not be harmful to property or improvements in the vicinity.

3. **That the proposed use will comply with the regulations and conditions specified in this code for such use.**

   The approval of the Project requires continuing compliance with all conditions, codes, and regulations, as applicable, prior to occupancy of any facility on the site for the Project. The conditions of this CUP are approximately in proportion to the proposed Project.

4. **That the granting of this conditional use will not adversely affect the general plan of the city or the adopted plan of any governmental agency.**

   The General Plan does not specifically identify Community Purpose Facilities but calls for villages in Otay Ranch that integrate neighborhoods, shops, employment opportunities with parks, schools and other civic facilities that create a community with a shared sense of pride and place. The CVMC requires that all planned communities, such as Village 8 West, provide CPF land (non-profit or specific for-profit uses) to serve its residents. The SPA provided the CPF-zoned land to serve

the social, cultural, and recreational needs of the community. The use is consistent with the General Plan intent since it promotes community and a sense of place. Thus, the granting of this CUP is in substantial compliance with the Chula Vista General Plan and the Otay Ranch Village 8 West SPA Plan.

Conditional Use Permit Findings (Specific to a Recreational Use), per CVMC 19.48.025.E:

Approval of recreational facilities shall be based upon evidence determined to be sufficient by the City that the proposed recreational facility meets the following minimum requirements:

1. **The site should be no less than 0.5 usable acres in size (usable means level areas with a maximum slope of 5:1).**

   The relatively flat Project Site is approximately 1.5 acres.

2. **The recreational facility is compatible with the surrounding land uses.**

   The Project is designed to serve the surrounding residential neighborhoods. The buildings are designed in a one-story Farmhouse style, consistent with the character and scale of the surrounding residential community. The use promotes activity and health for the local community. Many residents live within a ¼-mile walk of the site, and parking is available for those who may need to drive.

3. **Recreational facilities located on one-acre parcels or larger will contain all the amenities listed in subsection (H)(3) of this section plus one or more of the amenities listed in subsection (H)(4).**

   The Project meets the requirements of the CVMC: it contains a multi-purpose covered patio, a children's wading pool, a community meeting room, a swimming pool, an outdoor fire circle, and a turf lawn area.

Design Review Findings:

1. **That the proposed development will be consistent with the Village 8 West SPA Plan and the Landscape Master Plan.**

   The Project's design and land use are consistent with the Otay Ranch Village 8 West SPA Plan and the Landscape Master Plan. The SPA requires a DR for the swim club and a CUP for the CPF zone. The proposed landscape for the site complies with the Landscape Master Plan and SPA requirements for Community Use Landscaping, with outdoor gathering spaces and focal elements that identify the entry and enhance the architecture and recreational amenities.

2. **The design features of the proposed development are consistent with, and are a cost-effective method of satisfying, the Otay Ranch Village 8 West SPA Plan and the Landscape Master Plan requirements.**

   The Project's design features are a cost-effective method of satisfying, the Otay Ranch Village 8 West SPA Plan and the Landscape Master Plan. The Project provides recreational and community amenities and associated improvements. Water efficient plants and a water-efficient irrigation system are specified to reduce the overall maintenance cost of the Project.

I. **The following shall be accomplished to the satisfaction of the Director of Development Services, prior to issuance of building permits, unless otherwise specified:**

Notes:

1. A Chula Vista Fire Department Maneuverability Analysis shall be performed by a licensed professional engineer to verify the turning capabilities of this design apparatus. Travel paths should begin outside the site illustrating the turn onto all entry roads/drives, maneuvering around the site, and completed with an illustration demonstrating exiting from the site.
2. Paths must illustrate the full vehicle swept path (including wheel tracks and wall-to-wall vehicle overhang sweep) and must indicate a clear, unobstructed travel around the site without impact/collisions to buildings, curbs, landscaping, parking spaces, vehicles, etc. Wheel tracks shall not come within 1 foot of curbs. Apparatus bumper overhang shall not extend over curbs and the like.
3. Design speed (no less than 5mph); if speed varies indicate points of change by notes/labels.
4. The Chula Vista Fire Department Maneuverability Analysis shall be used to create an exhibit, which shall be submitted for review and approval.
5. Maneuverability Analysis shall also be designed to and confirm that any angle of approach/departure does not exceed 7°.
6. This detail shall be reproduced on the submitted exhibit.

NOTES:
1. REINFORCEMENT TABLE IS BASED ON ACI 318
2. TOP REINF IS HORIZONTAL REINFORCEMENT PLACED SUCH THAT 12" OF FRESH CONCRETE IS CAST IN THE MEMBER BELOW THE DEVELOPMENT LENGTH OR SPLICE.
3. EMBEDMENT AND LAP LENGTH IS BASED ON NORMAL WEIGHT CONCRETE. FOR LIGHT WEIGHT CONCRETE MULTIPLY THE TENSION DEVELOPMENT AND SPLICE LENGTHS BY 1.3.
4. THE DEVELOPMENT AND LAP SPLICE SCHEDULE CAN BE USED FOR NON CONTACT LAP SPLICES WHEN BAR SPACING IS LESS THAN 6".
5. THE SCHEDULE ABOVE IS APPLICABLE FOR THE FOLLOWING CONDITIONS. IF THE FOLLOWING CONDITIONS ARE NOT MET MULTIPLY THE LENGTHS PROVIDED BY 1.5.
   BARS NOT CONFINED BY TIES:
   * CLEAR SPACING OF DEVELOPED OR SPLICED BARS GREATER THAN OR EQUAL TO BAR DIAMETER AND
   * CLEAR COVER GREATER THAN OR EQUAL TO BAR DIAMETER
   BARS CONFINED BY TIES:
   * CLEAR SPACING OF DEVELOPED OR SPLICED BARS GREATER THAN OR EQUAL TO (2) TIMES THE BAR DIAMETER AND
   * CLEAR COVER GREATER THAN OR EQUAL TO BAR DIAMETER
6. USE 3 3/4" FOR CONCRETE BLOCK CONSTRUCTION
7. SPLICE AND DEVELOPMENT LENGTHS MAY BE USED FOR CONCRETE WITH DESIGN STRENGTHS WITHIN THE SPECIFIED RANGES.

PLACING OF STRANDS AND TENDONS

1. DO NOT ERECT INSIDE FORM OR DOUBLED-UP FORMS UNTIL STRANDS ARE IN PLACE.
2. MARK LOCATIONS OF INDIVIDUAL STRESSING ANCHORAGES AND DRILL 1" DIA. HOLE IN BULKHEAD PER STRAND LAYOUT ON PLAN.
3. PLACE ANCHOR, POCKET FORMER INTO BULKHEAD AND NAIL ANCHORS TIGHT TO BULKHEAD.
4. LAY ALL THE STRANDS IN ONE DIRECTION, BEGINNING AT THE DEAD END, IF THERE IS ONE. THEN IN THE OTHER DIRECTION.
5. WHERE DEAD-ENDS OCCUR, NAIL OR TIE APPROXIMATELY 3/4" FROM THE BULKHEAD. CENTERLINE OF THE ANCHORAGES ARE MINIMUM 3 1/2" BELOW TOP OF SLAB.
6. SPACING OF STRANDS MAY DEVIATE AS NECESSARY TO AVOID PLUMBING, HARDWARE, ETC. STRAND LOCATIONS AND DIMENSIONS SHOWN ON PLANS ARE FOR PLACING CONVENIENCE AND MAY VARY ± 12". 5" MIN. CLR. REQ'D. FROM PLUMBING, HOLDOWNS, PIPES, AND INSERTS.
7. AT STRESSING ENDS, REMOVE SHEATH APPROXIMATELY 6" INSIDE THE BULKHEAD. SLIDE END OF STRAND THROUGH THE HOLE IN THE ANCHOR AND THROUGH THE BULKHEAD.
8. STRAIGHTEN STRANDS, CURVING THEM SMOOTHLY AROUND HOLES OR OBSTRUCTIONS. PLACE SUPPORTS AT CABLE INTERSECTIONS AND TIE STRANDS TOGETHER.
10. D.E. AND S.E. MAY BE REVERSED END TO END.
11. CHECK STRANDS FOR TEARS IN PLASTIC SHEATH & REWRAP IF TEAR IS LARGER THAN 12" IN LENGTH.

CONCRETE (REFER TO ACI 318 Tables 4.2.1 & 4.5.1 SHOWN ON THIS SHT. FOR SULFATE EXPOSURE REQUIREMENTS)

1. CONCRETE TO BE A MINIMUM OF f'c= 3,000 PSI AT 28 DAYS. SEE FINAL SOILS REPORT & 2022 CBC FOR TYPE, PSI, WATER CEMENT RATIO, ETC., IF MORE RESTRICTIVE. 5" MAXIMUM SLUMP. DESIGN BASED ON PSI & CONSIST OF PORTLAND CEMENT ASTM C-150, WATER TO BE CLEAN AND POTABLE. CORROSIVE ADDITIVES (i.e. CALCIUM CHLORIDE) ARE NOT TO BE USED.
2. DEPUTY INSPECTION IS REQUIRED AT POURING OF CONCRETE.
3. PLACEMENT SHALL BE IN ONE CONTINUOUS OPERATION UNLESS OTHERWISE SPECIFIED. SLAB SURFACE SHALL BE CURED WITH HANTS COMPOUND OR EQUAL APPROVED ASTM 309 SPECIFICATIONS PRODUCT.
4. CONCRETE SHALL BE UNIFORMLY PLACED AND CONSOLIDATED AROUND ANCHORAGES. NO ROCK POCKETS.
5. A MINIMUM OF THREE (3) CYLINDERS PER SLAB SHALL BE TAKEN TO DETERMINE CONCRETE STRENGTH.

PREPARATION FOR STRESSING

1. CHECK INSIDE EACH POCKET HOLE MAKING SURE THAT THE EXPOSED PORTION OF THE ANCHORAGE IS CLEAR. IF A FILM OF CEMENT PASTE HAS INTRUDED, REMOVE IT COMPLETELY.
2. MARK ON THE STRAND AT A CONSTANT DIMENSION FROM THE EDGE OF SLAB.

STRESSING PROCEDURE

1. THE STRESSING OPERATION SHALL NOT COMMENCE UNTIL CONCRETE TEST CYLINDERS, CURED UNDER JOBSITE CONDITIONS, HAVE BEEN TESTED AND INDICATE THAT THE CONCRETE HAS ATTAINED 3000 PSI MINIMUM.
2. THE STRESSING OPERATION SHALL BE CONDUCTED BY A POST-TENSION EXPERIENCED EMPLOYEE IN THIS TYPE OF WORK. HE/SHE MUST EXERCISE CLOSE CHECKING AND RIGID CONTROL OF ALL WORKING OPERATIONS.
3. ALL PRESTRESSING SHALL BE BY MEANS OF HYDRAULIC JACKS OR EQUAL, EQUIPPED WITH ACCURATE READING AND CALIBRATED HYDRAULIC PRESSURE GAUGES.
4. THE DEPUTY INSPECTOR SHALL RECORD ALL JACKING FORCES AND ELONGATIONS AND SUBMIT REPORTS TO THE ENGINEER FOR THE STRUCTURAL ENGINEERS APPROVAL.
5. STRANDS THAT ARE STRESSED FROM BOTH ENDS NEED NOT BE STRESSED SIMULTANEOUSLY. ELONGATION FROM BOTH ENDS MUST TOTAL THE ELONGATION SHOWN ON PLANS.
6. TAKE SAFETY PRECAUTIONS NECESSARY. DO NOT PERMIT WORKMEN TO STAND BEHIND OVER, OR IN LINE WITH RAM AND STRANDS DURING STRESSING OF STRANDS.

SEALING STRESSING HOLES

Piping that penetrates metal framing shall use grommets, plugs, wrapping or other insulating material to assure that no contact is made with the metal framing. Insulation shall abut securely against all framing members • Piping installed in interior or exterior walls shall not be required to have pipe insulation if all of the requirements are met for compliance with Quality Insulation Installation (QII) as specified in the Reference Residential Appendix RA3.5. • Piping surrounded with a minimum of 1 inch of wall insulation, 2 inches of crawlspace insulation, or 4 inches of attic insulation, shall not be required to have pipe insulation.
14	☒	For systems serving nonresidential spaces, pipe insulation for the following applications is specified to comply with Table 120.3-A (see below) per 120.3: • Recirculating system piping, including supply and return piping of the water heater • The first 8 ft of hot and cold outlet piping, including between storage tank and heat trap, for a nonrecirculating storage system • Pipes that are externally heated
15	☒	Insulation shall be protected from damage, including that due to sunlight, moisture, equipment maintenance, and wind. Insulation exposed to weather shall be installed with a cover suitable for outdoor service per 120.3(b) / 160.4(f). Pipe insulation buried below grade must be installed in a water proof and non-crushable casing or sleeve.

F. ALLOCATED SOLAR ZONE

This table is completed if the project is designating a solar zone to comply with §110.10(b)1B. New construction consider the total roof area; Additions consider newly added roof area. This table demonstrates that the project has designated the minimum area required for the Allocated Solar Zone, and also that the requirements for Solar Zone Subareas have been met. Each subarea must be shown on a roof plan or documented in construction documents. The solar zones must also comply with fire code requirements, including, but not limited to, setback and pathway requirements. Requirements for interconnection pathways must also be included in construction documents, and the location is specified in this table.

This document is used to demonstrate compliance with prescriptive PV and battery requirements in 140.10/ 170.2 for nonresidential, multifamily and mixed-use buildings and prescriptive solar thermal requirements in 170.2(d)3C for multifamily and hotel/ motel occupancies. When PV/battery/solar thermal requirements don't apply or are traded using the performance approach, this document demonstrates compliance with mandatory solar readiness requirements in 110.10/ 160.8 for newly constructed buildings which are either multifamily ten stories or fewer, hotel/motel ten stories or fewer or all other nonresidential buildings three stories or fewer. It is also used to demonstrate compliance with solar readiness in 110.10/ 160.8 for additions to nonresidential, multifamily or hotel/motel building types which add more than 2,000 ft² of roof area. Alterations, or additions of less than 2,000 ft² of roof area, are not required to comply with solar readiness, solar PV and battery requirements and do not need to complete this document.

A. GENERAL INFORMATION

01	Project Location (city)	Chula Vista	04	Building Occupancies	All Other OccupanciesOfficeSupport Areas
02	Climate Zone	7	05	Construction Type	New construction
03	Conditioned Floor Area (ft²)	1165	06	Number of Stories	Bldg <= 3 stories

B. PROJECT SCOPE

The compliance path the project is using to comply per 110.10(b)1B/ 140.10/ 170.2(g and h) is indicated below.

Compliance with Solar Readiness Requirements in 110.10(b)1B

	01	
☒	Provide Solar Ready Area no exceptions	The project has allocated a solar zone on the roof plan per requirements in §110.10(b), as documented in Table F.
☐	Exception to Solar Ready Area: Installed Solar Photoltaic System	The project includes a permanently installed solar electric system having a nameplate DC power rating, measured under Standard Test Conditions, of no less than one watt per square foot of roof area as documented in Table G.
☐	Exception to Solar Ready Area: Installed Solar Water-heating System	The project is a hotel/motel or high-rise multifamily occupancy and includes a permanently installed domestic solar water-heating system complying with 170.2(d)3C and Reference Residential Appendix RA4, as documented in Table H.
☐	Exception to Solar Ready Area: Smart Thermostat and Alternative Energy Efficiency Measure	The project is a multifamily occupancy where all thermostats in each dwelling unit comply with §110.12(a) AND at least one additional measure listed in Exception 4 to §110.10(b)1B is installed, as documented in Table I.
☐	Exception to Solar Ready Area: Roof is designed for vehicular traffic, parking or for heliport	Plan sheet showing roof designed for vehicular traffic, parking or heliport
☐	Exception to Solar Ready Area: Roof too small	The project is new construction and has a total roof area <= 533 square feet[1]
☐	Exception to Solar Ready Area: Number of building stories	The project is nonresidential > 3 stories or multifamily/ hotel/motel > 10 stories.

[1]*FOOTNOTE: Buildings with roof area <=533 ft² would have a required solar zone < 80 ft² and are therefore exempt per 110.10(b)1.*

Compliance with Solar Photovoltaic (PV) and Battery Requirements in 140.10/ 170.2(g and h)

	01	
☐	Provided PV system and battery storage sized per 140.10/ 170.2 (g and h)	The project has included an installed PV system and battery storage system per requirements in 140.10/ 170.2(g and h) as documented in Table J.
☐	Exception to PV and Battery: Not enough Solar Access Roof Area	The total of all available Solar Access Roof Area(s) of the project site is less than three percent of the conditioned floor area as documented in Table J.
☐	Exception to PV and Battery: Required PV < 4kW	The required PV system size is less than 4 kW dc as documented in Table J..
☐	Exception to PV and Battery: No contiguous Solar Access Roof Area	The Solar Access Roof Area(s) of the project site contains less than 80 contiguous square feet as documented in Table J.
☐	Exception to PV and Battery: Can't meet snow load	The project has a roof design where the enforcement authority has verified it is not possible for the PV system, including panels, modules, components, supports, and attachments to the roof structure, to meet ASCE 7-16 Chapter 7, Snow Loads.
☐	Exception to PV and Battery: Multi-tenant without VNEM or Community Solar	The project is a multi-tenant building in an area where a load serving entity does not provide either a Virtual Net Metering (VNEM) or community solar program.
☒	The prescriptive PV/battery requirement has been traded off using the performance compliance approach as documented on the PRF Certificate of Compliance form.	

Compliance with Solar Thermal Water Heating Requirements in 170.2(d)3C (Multifamily and hotel/ motel occupancies only)

	01
☐	The project includes a hotel/motel or multifamily occupancy with a gas or propane central water-heating system (serves 2+ dwelling units) and includes a permanently installed domestic solar water-heating system to comply with 170.2(d)3C and Reference Residential Appendix RA4, as documented in Table H. Compliance meets Exception 2 to solar ready requirements in 110.10(b).
